

Puzzle IV

Polyalphabetic Substitution

The method used for this puzzle is *polyalphabetic substitution (Vigenère cipher)*. Individual plaintext characters are encrypted using a lookup table, containing multiple alphabets, and a character from a **secret key**.

This method is easily **broken**, letter frequencies are revealed and the repeating key is also a weakness!

Darth Vader. (Star Wars, George Lucas)

We have found a cache of messages believed to be from Darth Vader to the creators of his Death Star. They must have agreed on a **secret key** in the past – maybe an item of clothing that Darth Vader wears.

We have learned that the **key** is 4 characters in length. Can you guess the **key** and discover the message?

Decoder

To decode your ciphertext:

1. Align your **key** to the **ciphertext** (repeat key if there is remaining ciphertext).
2. Find the character from your **key on the top row**.
3. Look **down that column** to find the **ciphertext** character.
4. Look **left along the row** to find the **plaintext** character.
5. Repeat for each **ciphertext** character until finished!

Ciphertext

Decode the following message:

U D W K X L Q K

E T S B A T Z O

D W A C Q A K Z

T E J O

Your Answer
